***** 5 out of 5 (50 ratings)

Protek Stable Coat offers excellent long-term protection for stables and all other types of timber building. This coating is designed for the waterproofing of pressure treated timber buildings. The unique quick drying formulation delivers a traditional finish.

Did you know? – you can apply Stable Coat to pressure treated (tanalised timber) such as garden furniture to waterproof and reduce fading.

We developed Stable Coat as we were being asked by stable owners and manufacturers for a wood treatment that was animal safe, environmentally sound, quick and easy to use with a good finish... so we made this. It has been one of our best selling lines for over 5 years.

Product fact

Water based micro-porous acrylic coating that has an ultra high water repellent additive that creates an extreme hydrophobic layer of protection.

Low VOC and low odour

Pet and plant friendly

Child friendly – complies to EN71 parts 2 and 3 relating to child safety and flammability

Natural stain finish

Quick drying

Application tips

Available in 5 or 25 litre containers

Use a brush or a spray

What our customers say

'Brilliant product, so easy to use'. J Hart

'Easy to apply, dries quickly. Quality finish'. A Clark

'Brilliant product. Looks classy, and super fast to apply with a sprayer'. Tom Beckett

'The product as stated was easy to use, went a long way, was an attractive colour and easy to wash out of the brushes. I researched several products and this had good reviews and appeared to be good value for money for an animal friendly, low VOC, low odour stain. I will definitely use again'. Deborah Raggett
