

# Garden Fence Makeover

The old fence was checked over and repairs made to loose panels.

All dirt and algae was removed with a wire brush and soapy water.

Once the panels were fully dry, a single coat of wood stain was applied.

One coat of Wood Stain & Protector in Pale Sage was applied leaving a light natural looking stain effect with the grain of the timber showing through. For fencing only one coat is required to create a water-repellent coating with a maintenance coat every 2 - 5 years depending on levels of wear & tear and exposure to the elements.

Apple blossom looking beautiful in the spring

After the blossom the fence still looks lovely
